

The road to biopesticide registration

Who we are

Linge Agroconsultancy is an independent consulting company specialised in facilitating the registration process of plant protection products and biocides.

Need support with the authorisation of biopesticides?

To introduce a new biopesticide (e.g. a microbial, pheromone or botanical) to the market, registration of the product and the active substance in the product is mandatory within the framework of Regulation (EC) No 1107/2009. Linge Agroconsultancy is the ideal partner during the application procedure for EU substance approval, national product authorisations and in solving related issues.
