Bloomeo software : manage your trial data and prove the efficiency of your biosolutions

Manage protocols to understand interaction effects

- Define mono or multi factorial protocols, to screen products in controlled conditions in the laboratory, to conduct your trials in microplots, and to test in real conditions in farmers' fields.
- Get traceability of what has been already evaluated not to repeat trials but to increase conditions variability

Interact with your CROs, partners and clients

- Exchange and validate your protocol with CROs.
- Provide the access to the system to CROs or partners.

All your product development data in one place

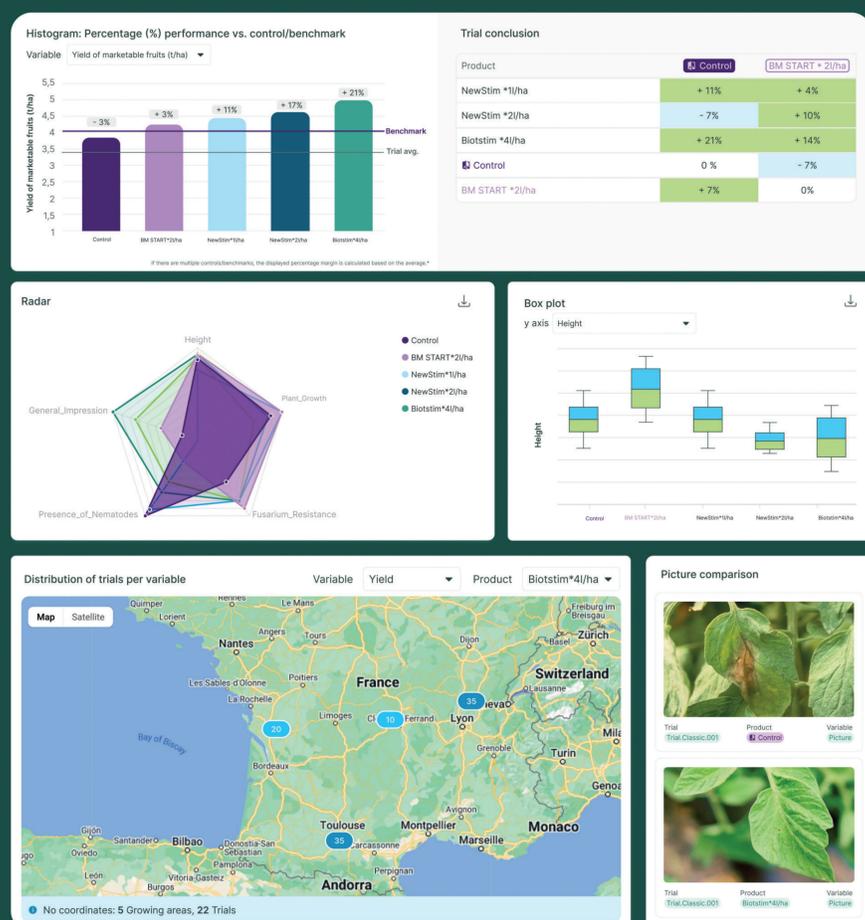

- User-friendly app for trial data collection on IOS and Android
- Centralize screening, efficacy and marketing trial data
- Enrich your data set with pedoclimatic information

Perform analysis across trials

- Dynamic graphs to analyze data at trial, multi-environmental trial, product or market levels
- Statistical models to evaluate the success conditions of your products

Bloomeo web application transform your experimental data into interactive dashboards, integrating graphical, spatial, and tabular analytics to streamline result analysis, enable comprehensive performance evaluation, and support robust, data-driven conclusions for biosolutions.

The IOS and Android app enables offline data entry through an ergonomic interface with optional label scanning for rapid, accurate sample identification.
